

*Leveraging CIM standards as a foundation for future digitalization use cases within utilities*

***Presentation abstract:***

Regulations, standardization and data integration are paving the way for utilities to automate data exchange amongst traditionally separate utility systems. During this presentation, Siemens PTI will discuss our commitment to CIM and CGMES within the PSS® Portfolio – power system simulation and modeling software. Siemens will also showcase our vision around one grid, one model – facilitated by CIM to provide an Electrical Digital Twin with PSS® Portfolio enablers.
